

# CMU Computer Club Presents

**Jay Crim**

Senior Software Engineer

## **Natural Language Processing at Google**

7PM, Thursday Nov. 15  
NSH 3305

Originally written by Peter Norvig, this tech talk will discuss how the availability of more data online (and the computing power to process this data) has changed the field of NLP, and ultimately the way we interact with the world. He will also share what it's like to work at Google and describe opportunities available for students. This will be accompanied by a brief presentation on what the Computer Club has been up to lately and how anyone interested can get involved.

### Bio:

Jay Crim is a Senior Software Engineer at Google. His research interests include Natural Language Processing and User Interfaces for Web search. Jay received an undergraduate degree in Mathematics from The Johns Hopkins University and a MSE in Computer and Information Sciences from University of Pennsylvania.
